

Attempting to build a home to higher standards must be perceived as bright

Mainly because the researched pieces (products) are precisely placed to achieve full might

This then permits your home to perform to an expected healthy delight

An important building objective should be not to construct a home too fast

So deciding on a deliberate methodical building process will make it last

Way Past....any time frame and you may even say “to its entire life span” when asked

Piece by piece we place together all the engineered wood, membranes, and metal fabrications

Chosen from hours of product considerations to then be approved for the selected stock

To emerge as a sought after rock solid dwelling on a cherished block

An important building objective should be not to construct a home too fast

So deciding on a deliberate methodical building process will make it last

Way Past....any time frame and you may even say “to its entire life span” when asked

A fundamental rule.....no home should be built in a hurry

and the builder should prove he didn't which should eliminate any worry

And no matter how rainy the weather

all our carefully chosen pieces (products) continue to bond together

for the life span of any building will be forever
